## Help: Wiki Page Names

## Wiki Page Names

Wiki page names commonly use the CamelCase convention. Within wiki text, any word in CamelCase automatically becomes a hyperlink to the wiki page with that name.

CamelCase page names must follow these rules:

- 1. The name must consist of **alphabetic characters only**. No digits, spaces, punctuation, or underscores are allowed.
- 2. A name must have at least two capital letters.
- 3. The first character must be capitalized.
- 4. Every capital letter must be followed by one or more lower-case letters.
- 5. The use of slash ( / ) is permitted in page names (possibly representing a hierarchy).

If you want to create a wiki page that doesn't follow CamelCase rules you can use the following syntax:

\* [wiki:Wiki\_page], [wiki:!ISO9000]

```
* [wiki:"Space Matters"] that page name embeds space characters
```

```
* or simply: ["WikiPageName"]s (!MoinMoin's internal free links style
```

```
)
```

This will be rendered as:

- Wiki page, [wiki:!ISO9000]
- Space Matters that page name embeds space characters
- or simply <u>"WikiPageName"</u> (MoinMoin's internal free links style)

Finally, one can also append an anchor to a Wiki page name, in order to link to a specific section within that page.
